ASSET INSPECTION

# Capture every detail.

Inspect assets safely and quickly with a Skydio aerial inspection program.

A Skydio asset inspection program delivers actionable data from any angle to protect your critical assets across a wide range of industries and working environments.

**Scan assets autonomously for detailed, interactive 3D models using your preferred photogrammetry software.**
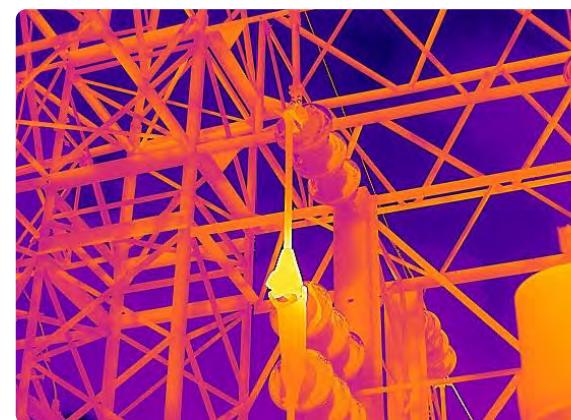

## Unlock efficiency powered by automation.

Inspect more assets with greater accuracy in less time with your existing workforce. AI-enabled Skydio drones are easy for anyone to fly and unlock cost-efficiencies and scaling advantages at every step.

## See every detail. Before it's too late.

Best-in-class sensors, thermal imaging, and the ability to access any vantage point gives you a complete picture of your assets down to the millimeter, to stop incidents before they start.

## Keep your team and your assets safe.

Traditional inspections put workers in harm's way and require climbing, scaffolds, and lifts. Skydio drones can go anywhere remotely while your people are kept at a safe distance.

# Make every step of your workflow, work better.

**Initiate**

Initiate asset inspection work orders.

**Plan**

Plan inspections remotely or via the Skydio Controller.

**Capture**

Capture high-resolution video/images on-site.

**Synthesize**

Synthesize results in the field and send data to the cloud.

**Deliver**

Deliver results to your preferred analysis tools.
