

Site Security: Patrol. Deter. Respond.

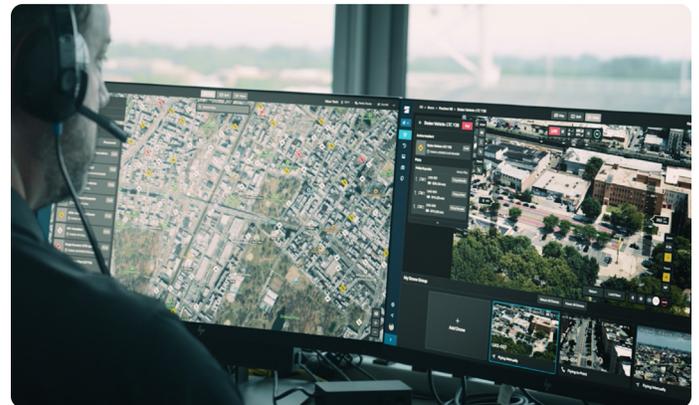

Cut false alarms, close blind spots, and put eyes on any situation in seconds.

Modern physical security demands speed, coverage, and confidence that traditional methods can't deliver. Guards are expensive, and turnover causes problems. Fixed cameras only see one angle. And 94% of alarms are false, draining resources while real threats slip through. Skydio meets that challenge with dock-based, autonomous drones that launch in seconds to verify alarms, patrol perimeters, and deliver real-time visibility across every site, enhancing coverage and lowering costs across your operation.

Security that's always on, always ahead.

No missed patrols. No guessing at false alarms. With Skydio autonomous drones, sites stay under live watch, incidents are confirmed in seconds, and staff focus on the threats that matter.

Patrol

Automated patrols cover entire sites in minutes with persistent coverage.

Deter

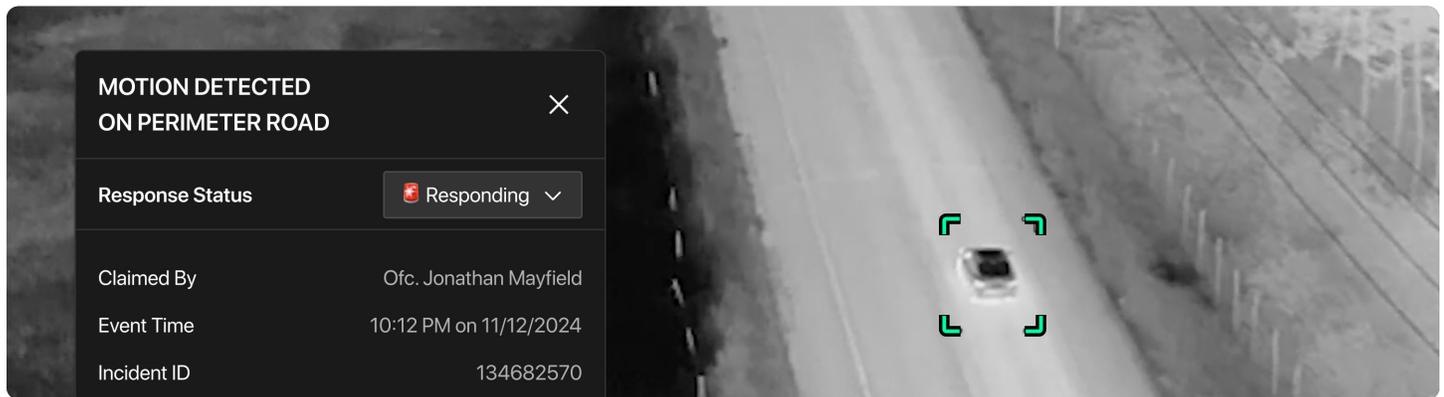

Lights, speakers, and visible drone patrols signal that every corner of your site is actively protected, deterring crime before it starts.

Respond

When an alarm or access event triggers, drones are airborne in under 20 seconds. Live video confirms what's happening in real time.

From alert to response in seconds.

How automated patrols, live video, and AI detection keep your team a step ahead.

Expand coverage, without adding headcount.

3 docked drones provide persistent aerial coverage, giving you the equivalent amount of perimeter patrol and alert response hours of 15 full-time guards. Save time, keep staff focused on real threats.

The real power of this technology lies in its ability to break down internal silos. By collaborating across different lines of business—whether it’s the security team on perimeter patrol or the facilities team managing infrastructure inspections—we create a shared value proposition. We’re moving from ‘just a security tool’ to an integrated platform that subsidizes dangerous manual inspections and meets the specific operational needs of the entire site.

Proudly designed, assembled, and supported in the USA.

Initiate

Launch missions on schedule or automatically from IDS alerts, access control events, or third-party sensors.

Patrol

Cover your full site day or night with pre-planned or on-demand routes. Be on scene in seconds.

Monitor

Stream live video and thermal imaging directly into your VMS, command center, or operator consoles.

Detect

AI-powered analytics surface real threats in real time while filtering out nuisance alerts.

Act

Confirmed threats give teams instant context. Share live video via ReadyLink to coordinate response.
