**Skydio**

SITE SECURITY

Any site, secured.

Patrol more area faster, safely, and from every angle with a Skydio drone program.

Fixed camera systems lead to vulnerable blind spots. Skydio drones let you see the big picture down to the smallest detail — even in spots hard to patrol on foot.

Monitor every site at the same time.

Multiply your coverage area with one pilot controling many drones at once, or patrol autonomously with our advanced AI. You can even monitor drones at multiple sites from one central command center.

Detect threats in real-time.

Automatically detect people, vehicles, and other objects so security responders can know exactly what to expect before they arrive.

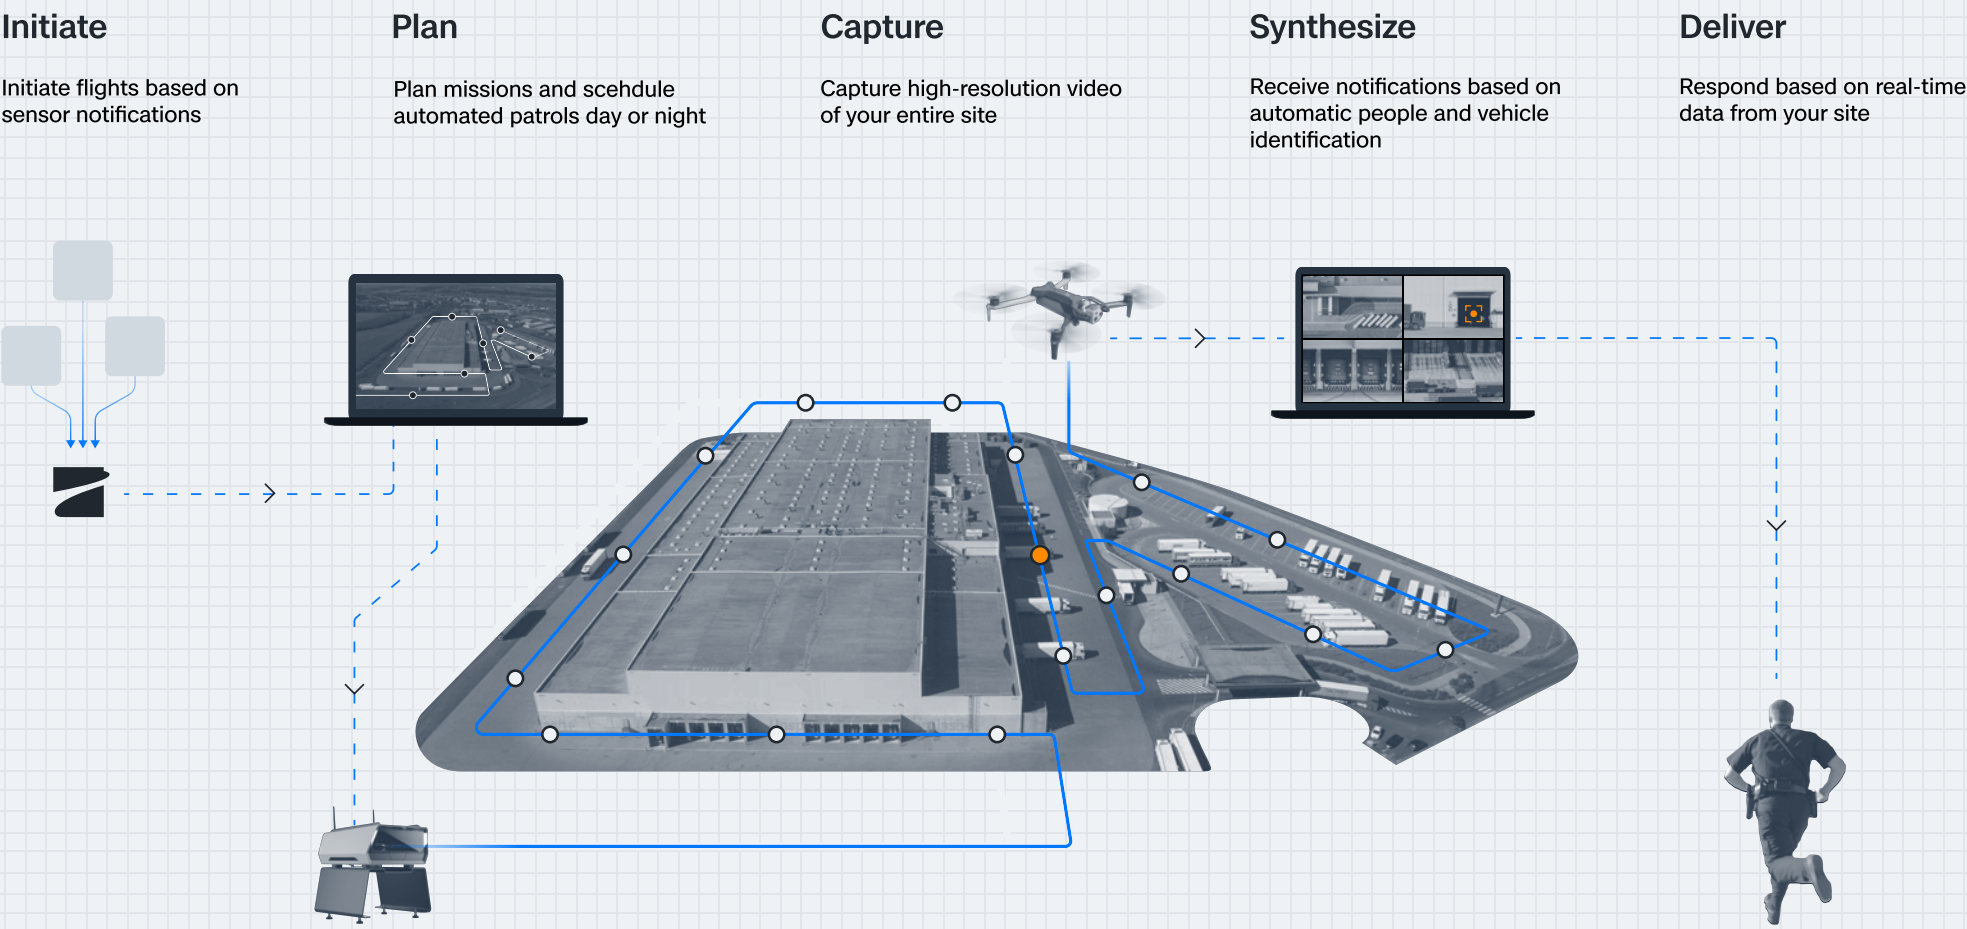

See from any angle, day or night.

Safely patrol entire sites from almost any angle, even areas impossible to patrol on foot. Thermal imaging allows for monitoring night and day.

See everywhere. Be ready for everything.

Initiate

Initiate flights based on sensor notifications

Plan

Plan missions and scehdule automated patrols day or night

Capture

Capture high-resolution video of your entire site

Synthesize

Receive notifications based on automatic people and vehicle identification

Deliver

Respond based on real-time data from your site

"

I'm very excited to see the X10 because it's going to do a lot more than what drones have done. It's all about automation and making it very easy to use the drones and getting the data that's required.
