## Enabling BVLOS Operations with Skydio Remote Ops

Skydio Remote Ops solutions enable Beyond Visual Line of Sight flights from dock-based and operator-launched drones or even handing over flight control from a local pilot to a remote pilot, from anywhere.

Skydio's Regulatory Team helps organizations unlock the full potential of Skydio Remote Ops, making it easy to secure the necessary FAA approvals, so you can get maximum value out of remote operations and focus on your business.

Skydio offers regulatory packages tailored to your organization's current operations and goals, including Remote Ops Waiver Application and Program Documentation.

Our regulatory experts are equipped to help you secure the advanced FAA BVLOS waivers and provide the necessary support for your program's long-term growth.

---

### Waiver Application Remote Ops, Remote Ops Essential

Whether you're getting started or scaling multiple locations, we have packages that will help you achieve your objectives.

Packages include:

- Development and delivery of the FAA request package, including written Concept of Operations, Safety Case, and Skydio Technical Supplement
- Review of the FAA request package with your team
- Guidance on submitting the FAA request
- Support for any questions or inquiries by the FAA

### Program Documentation Enterprise

Get your Remote Operations program off the ground quickly and utilize best practices from day one. Skydio delivers drone program documentation templates that meet FAA standards when requesting Part 107 BVLOS operations and support the implementation of BVLOS operations under a Part 107 waiver. Skydio also provides direct consulting time with their regulatory experts to aid in completing the templates, and offer recommendations on best practices that are tailored to your specific operations.

Skydio provides templates for the General Operating Manual, Training Manual, and Safety Manual and works with your organization to implement scalable processes for Remote Operations.

### **How many locations are covered in the Remote Ops Waiver Application package?**

---

It depends on which package is purchased. The Remote Ops Essential package covers up to three locations and is intended for customers that are not ready to scale or are limited to a geographic area where they want to conduct remote operations.

Our standard Remote Ops waiver package can cover a much higher number of locations as long as they have a similar aviation risk profile.

### **Can I conduct Dock-based or Operator-Launched beyond line-of-sight flights without an FAA BVLOS waiver?**

---

No, not if true remote operations are the goal. Without a waiver, a Pilot must operate the drone within visual line-of-sight. Skydio recommends that customers pursue an FAA BVLOS waiver to experience remote operations and get maximum value from their drone program.

### **Can I operate in controlled airspace with a waiver?**

---

With the addition of an Airspace Authorization, you can operate under a waiver in controlled airspace. Skydio will assist you with the first Airspace Authorization request as part of the Waiver Application package, and provide the materials used in that Airspace Authorization as a template to use on future airspace authorizations.
