# Skydio

Site Security for Correctional Facilities: Patrol. Verify. Respond.

Respond to alarms, detect threats, counter drone incursions, and protect officers.

Correctional facilities demand security that never blinks. With staffing stretched thin and threat tactics constantly changing, traditional tools can't keep pace. Fixed cameras face inward while walls, towers, and shadows create blind spots. Posts go unfilled, and overtime exhausts the workforce. Skydio delivers persistent perimeter patrol, rapid alarm verification, and real-time aerial response so correctional officers stay on post and command staff stay ahead of emerging threats.

Facility-wide awareness powered by drones.

Skydio extends coverage and command visibility without pulling officers from their posts. Autonomous aerial patrols deliver awareness across yards and perimeters, helping facilities anticipate and respond to threats before control is compromised.

Patrol

Automated patrols maintain persistent coverage along perimeters, yards, and exterior approaches.
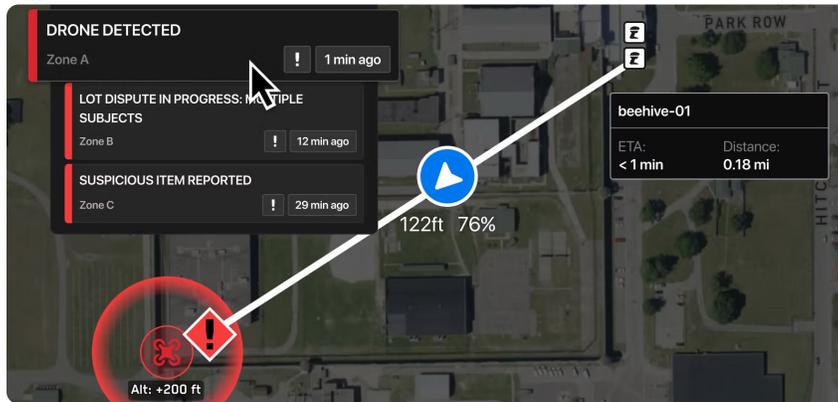

Verify

When an incident or motion alert triggers, drones launch to get eyes on the activity in seconds.

Respond

When illicit activity is confirmed, drones track incidents as they unfold, stream video to command staff for real-time situational awareness.

Unified command from detection to documentation.

Skydio integrates with Dedrone for airspace monitoring and Axon for evidence management, creating a single continuous workflow to **counter unauthorized drones** and **interdict contraband** before it breaches the fence.

Put aerial coverage on post.

Post

Assign or trigger drone missions to extend visibility across yards, fence lines, and blind spots.

Detect

Automatically detect people and vehicles, focusing staff attention on priority incidents.

Assess

View live aerial video in your existing VMS or consoles. Confirm whether activity is routine, a false alarm, or a threat.

Direct

Share live video across responding teams via ReadyLink and give command staff sustained oversight to act immediately on verified threats.

Document

Capture video, photos, and telemetry as events unfold. Post-event, evidence uploads to Axon Evidence or your VMS with CJIS-aligned security.

Expand coverage, without adding headcount.

3 docked drones provide persistent aerial coverage, giving you the equivalent amount of perimeter patrol and alert response hours of 15 full-time correctional officers. Save time, keep staff focused on real threats.

In an era of chronic staffing shortages, corrections leaders can no longer rely solely on boots on the ground for perimeter security. Automated drone technology doesn't replace our officers; it augments them, providing the 'eyes in the sky' needed to verify alarms instantly and manage incidents safely. It's about giving our teams a tactical advantage they've never had before.

Todd Craig, Former Assistant Director
Federal Bureau of Prisons
